

**CAN YOU HELP? We are looking for healthy older adults to participate in a trial investigating a novel approach to improving memory.**

The Monash Alfred Psychiatry Research Centre is seeking volunteers between 65 and 80 years of age to investigate the effect of gentle brain stimulation on attention and memory. We are testing whether gentle electrical stimulation can improve these skills in healthy older adults.

Participation will involve visiting our research centre in Prahran Monday to Friday for two weeks. These sessions will take between 2 and 3 hours each. You will be provided compensation towards your time and travel costs.

Together we will complete an interview, do some computerised activities, take a recording of your brain waves and give you a short session of gentle non-invasive brain stimulation. Stimulation is safe and not painful. It is given while you are awake and alert and activates only a small area of cells on the surface of your brain.

If you think this sounds interesting and would like to know more please contact:
